Wine Quality Analysis: Key Findings

1. Dataset: 1,599 red wine samples with lab measurements and a quality score.
2. Groups: High (quality 7 or more), Medium (5 to 6), Low (below 5).
3. Most samples are Medium (1,319, about 82%). High has 217 (about 14%) and Low has 63 (about 4%).
4. High-quality wines have the highest average alcohol (11.5%), against about 10.2% for Low and Medium.
5. High-quality wines have the lowest volatile acidity (about 0.4), against about 0.7 for Low-quality wines.
6. High-quality wines have slightly higher sulphates (about 0.7) than Low and Medium (about 0.6).
7. Conclusion: higher alcohol and lower volatile acidity go with better wine quality.
